DETAILED ACTION

1. This application has been removed from suspension. The following new rejections are applied.
2. Claims 21-42 are pending and under examination.

New Rejections

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent. The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 21-32 and 39-42 are rejected under 35 U.S.C. 102(e) as being clearly anticipated by Kunsch et al (U.S. Patent no 6,593,114, filed on October 20, 1997, issued July 15, 2003 with priority under 119(e) to provisional 60/009,861 filed January 5, 1996).

Art Unit: 1645

Kunsch et al discloses a polynucleotide of SEQ ID NO:142 from *Staphylococcus aureus*. Kunsch et al teach vectors, host cells and methods of producing open reading frames (the polypeptides) that are encoded by the polynucleotide (columns 14-16). Kunsch et al teach that SEQ ID NO:142 is 97.2% identical over nucleotide residues 1-1029 of SEQ ID NO:1 as instantly claimed. The nucleotides disclosed by Kunsch et al have 29 mismatches over a length of 1029 nucleotides, and as such the polynucleotide meets the claimed limitation of up to thirty, ten, five, or three nucleotide changes per 100 nucleotide residues of the nucleic acid sequence.

Claims 33-38 are objected for depending upon a rejected base claim, however claims 33-38 are free of the published prior art of record.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark Navarro, whose telephone number is (703) 306-3225. The examiner can be reached on Monday - Thursday from 8:00 AM - 6:00 PM. The examiner can be reached on alternate Fridays. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor Lynette Smith can be reached at (703) 308-3909.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist, whose telephone number is (703) 308-0196.
